Eval. Notes:	Investigation was conducted of facility to verify generator status after observation of a drum marked Hazardous Waste at the site for an extended period of time. Facility is a gas station and convenience store. No repair bays are present at the site and vehicle repairs are not done at the site. According to Mr. Sangh, the drum is used for the occasional collection of oil and water that accumulates in basins around fill pipes at the top of the gasoline tanks at the site and in dispenser sumps. He stated that a contractor, Oxygen Environmental, routinely visits site to monitor tank systems and manage the waste. No problems were noted with the drum and no spills/staining on the ground were observed at the time of the investigation. In a phone conversation with Mr. Gomez on 5/5/14, he explained that he visits the site every month to conduct required testing/monitoring of the tank systems at the site and maintenance of the basins/sumps that routinely accumulate oil and water. He estimated that 2-3 gallons is generated each month and put into the drum. The waste is periodically pumped from the drum by Lorco and shipped from the site for recycling. Since all waste is being properly shipped from the site and no container leaks were noted, and facility was found to be a CESQG of hazardous waste, no further action is necessary and case can be closed. Mr. Gomez was advised to consider employing measures to ensure that the drum doesnt begin to leak since it is maintained outside in the elements for a prolonged period of time.											

No Linked Violations
